

Rakshak

BunnieX Hackathon 2026

Blocklists stop numbers. Rakshak understands the script — and fights back.

A real-time AI that sits inside the scam call: it warns the victim mid-call, alerts the family, baits the scammer to expose their payment rails, and turns every call into evidence and shared intelligence.

Listen

Streaming STT + fraud-script classifier tracks the digital-arrest playbook stage by stage.

Intervene

Hindi/English guardian voice, stop card, live family alert — before money moves.

Fight back

A counter-agent stalls the scammer and captures account numbers / UPI IDs as evidence.

The problem: ₹22,495 crore stolen in one year

₹22,495 cr

Lost to cyber fraud in India in 2025 (NHRC / I4C reporting)

297,727

Digital-arrest complaints between 2022 and May 2026

2-13%

Recovery rate after money leaves — speed is everything

The attack is a script

- Authority pretext: “I am Inspector Sharma from the CBI...”
- False accusation: Aadhaar linked to a narcotics case
- Isolation: “Do not tell anyone, stay on this video call”
- Fund verification: transfer to an “RBI account”
- Extraction: irreversible UPI / RTGS transfers

Why existing tools fail

- Caller ID and blocklists decide *before* the call — the fraud happens inside it.
- US/EU elder-fraud products screen or terminate calls, US-first, no Indian scripts.
- Government portals act after the money is gone.
- Voice cloning now needs only 3-5 seconds of public audio.

Nobody acts while the victim is still on the line.

What Rakshak does — in the middle of the call

1 • Listen

Deepgram Nova-3 transcribes the call in real time. A Featherless open-weight LLM classifies family + stage against a genome of known scripts.

2 • Intervene

At the isolation or payment cue: guardian voice (Kokoro, Hindi/English), a stop card, and a live alert to the family war room.

3 • Fight back

The counter-agent takes over as a slow, hard-of-hearing persona, stalls the scammer and makes them repeat payment details.

4 • Recover

Golden-hour pack: timeline, red flags, caller identifiers, pre-filled complaint draft for cybercrime.gov.in / 1930, bank + UPI freeze checklist.

5 • Learn

Every confirmed call contributes to the **Scam Genome** — script fingerprints and scammer identifiers. Blocklists can't compound; this can.

Who it's for

The buyer is the adult child; the protected user is the parent. One-tap protection, zero setup for the parent.

Live proof (nothing mocked)

 Guardian warning

 Family war room

Captured on a real run

- Stage progression: pretext → isolation → extraction, severity 90/100
- Spoken digits → account 504122339910
- Mis-heard UPI → repaired to verificil@okaxis
- Classification latency ~2s on DeepSeek-V4-Flash (Featherless)

How it works

```
Parent Shield (PWA)
| audio + events over WebSocket
▼
Durable Object "CallAgent" — Deepgram Nova-3 STT
|                               Featherless DeepSeek-V4-Flash
|                               Kokoro TTS (guardian + decoy)
|                               script state machine + policy
|                               identifier extraction
|
(words→digits, fuzzy UPI)
▼
Family War Room ← live transcript, alerts, actions
Golden-hour pack ← evidence bundle + complaint draft
Scam Genome      ← GenomeAgent D0 (scripts + identifier index)
```

Sponsor tech at the centre

Featherless runs the fraud classifier and both synthetic voices through one OpenAI-compatible API. Deepgram Nova-3 provides realtime STT; Workers AI backs it up, and Cloudflare runs the realtime Durable Object runtime.

Engineered for honesty

Schema-validated JSON, deterministic rule-engine fallback, TTS fallback chain, visible audit trail, and a documented “simulated vs live” boundary.

Privacy & safety

Consent-first, transient audio, scoped guardian access, no payments executed, fictional decoy persona.

Impact & what's next

Why this can be a company

- **Buyer:** adult children (₹99–199/mo family plan); B2B2C with banks, insurers and senior-living communities who bear elder-fraud liability.
- **Moat:** the Scam Genome compounding registry + India-specific script intelligence + distribution via family sharing.
- **Timing:** losses peaked 2024–26; Truecaller validated household demand but stops at caller ID; regulation is pushing the ecosystem toward intervention.

Roadmap

- Telephony bridge (call forwarding to a screening line).
- WhatsApp/SMS guardian alerts.
- Voice-authenticity check against enrolled family voiceprints.
- More Indian languages; public Scam Genome API for banks and NGOs.
